Read the given passage and answer the questions that follow.

When someone says the word 'desert', you may think of a very hot place covered with sand. But, Earth's largest desert is actually a very cold place covered with ice: Antarctica. A place is described as a desert if it receives very little rainfall. Antarctica, the coldest place on earth, has an average temperature that usually falls below the freezing point. And because cold air holds less moisture than warm air, the air in Antarctica does not hold much moisture at all.

The central part of Antarctica receives an average of less than 2 inches of snow every year. The coastline of Antarctica receives a little bit more—between seven and eight inches a year. Because Antarctica gets so little rain every year, it is considered a desert. So, it is a cold desert.
